

Problem:

Group travel planning is often frustrating and time-consuming.

5-Why Method**Why is group travel planning frustrating?**

→ Because it's difficult to reconcile everyone's wishes, schedules, and budgets.

Why is it difficult to reconcile everyone's wishes, schedules, and budgets?

→ Because each group member has different ideas and communication is often unstructured (e.g., via WhatsApp, notes, voice messages).

Why is communication often unstructured?

→ Because there is no central, intuitive platform where everyone can simultaneously state their preferences and coordinate.

Why is there no central platform that simplifies this process?

→ While there are many platforms like Booking.com, Airbnb, GetYourGuide, or Google Trips, they focus on booking and information provision for individuals. Planning tools like Doodle or Trello can be used in groups but are not specifically designed for travel. A central app that combines inspiration, coordination, and group decision-making is missing.

Why are existing tools focused on individuals?

→ Because the market has historically been strongly geared towards quick, individual transactions. Platforms like Booking or Expedia optimize for conversion rates – i.e., quick bookings. Tools like Instagram or Pinterest provide travel inspiration but offer no bridge to concrete planning. Group logic is more complex to implement, which is why many providers avoid this challenge.

Insight:

This Project tries solving a deeply rooted problem in the structure of today's travel platforms: They are not designed for collective decision-making processes. The app can close this gap with a social, interactive, and collaborative interface.
